

What is claimed is:

1. A processor connected via a network system to an operation terminal unit in which inputs are made through a Web browser and having at least a Web server division, a CGI script control division and a processing program division, said processor having;

5 a display control file describing therein display control information for a Web page that is displayed on said operation terminal unit, wherein
10 said CGI script division analyzes the description on said display control file which is designated by said Web browser, executes for processing said processing program following said description of said display control file and outputs display control
15 information on said display control file to said Web browser based on the result of said processing.

2. A processor as set forth in Claim 1, wherein, in said display control file, said display control information is described separately in a file control
20 division and an HTML division.

3. A processor as set forth in Claim 1, wherein said CGI script control division reads said display control information for each line and executes an analyzing process.

25 4. A process as set forth in Claim 2, wherein said CGI script control division embeds in an HTML output dynamic information related to the display of said Web page following the description in said HTML division and outputs the HTML output to said Web server division.
